

An open, universal literature-data cross-linking service

The Challenge:

Sharing information about the links between the literature and research data.

What is the solution?

Building on pre-existing components and international initiatives, the RDA/WDS Publishing Data Services Working Group is one of the drivers behind the "Data Literature Interlinking Service" (DLI), developed in a synergy with OpenAIRE & PANGAEA. DLI is aimed at improving visibility, discoverability, re-use and reproducibility by bringing 2M+ existing article/data links together, normalize them using a common schema, and exposing the full set as an open service.

Produced by: **RDA/WDS Publishing Data Services WG**

What is the impact?

Accessing and using literature-data links at large scale in an efficient and reliable way allows different stakeholders in the data publishing landscape to improve their services, increase data discoverability and usability.

Data centres will be able to assess much better how often their data is used in the literature, and present their users with links to relevant publications.
